RCA SPIDER-WEB ANTENNA SYSTEM

. . . a transoceanic communications type antenna for the home

List Price

\$8.95

Stock No. 9685

Combining its experience in transoceanic communications work with its knowledge of home receiver requirements, RCA has produced a remarkable new antenna system. This antenna, which is known as the RCA Spider-Web Antenna, consists of a series of doublet antennas and an improved transmission line to the receiver. It is so constructed that additional doublets may be added to increase the frequency range to 70,000 K.C. (4 meters). More stations, less noise on the short-wave bands and an extremely wide frequency range are built-in characteristics of this remarkable new antenna.

*Only with the **RCA SPIDER-WEB ANTENNA**
do you get all of these features*

- **FULL FREQUENCY COVERAGE**—The RCA Spider-Web Antenna System gives excellent signal pickup over the frequency range from 140 to 23,000 kc. By adding the Stock No. 9689 High Frequency Kit, List Price \$1.50, the range is increased to 70,000 kc. with full noise reduction. This feature is especially important because of the increased frequency range of modern all-wave receivers. The high frequency kit may be added at any time, not necessarily when the antenna is first installed.
- **LESS NOISE**—The balanced doublets and transposed transmission line eliminate all pickup on the lead-in in the short-wave bands. This greatly reduces man-made static (noise) from automobiles and electrical devices that mar short-wave reception.
- **MORE STATIONS**—A multiple doublet of unique design insures greater signal pickup in every receiving band. You'll hear many stations not previously heard.
- **FACTORY ASSEMBLED**—Complete soldering and assembling make it possible to erect the antenna in a few minutes after providing supports.
- **SMALL SPACE REQUIRED**—A span of 38 feet and a vertical clearance of 12 feet are the entire space requirements of the RCA Spider-Web Antenna. You'll find it easy to install in almost any location. Because double-supports are eliminated, it is considerably easier to install than the former double-doublet antenna systems.
- **STURDY CONSTRUCTION**—Use of seven-strand No. 22 wire and a truss-type mechanical design insures the strength necessary to withstand severe winter weather disturbances, including heavy ice formation. The illustration shows one of these installations at Camden, N. J., during the severe winter of 1936.

how. Someone in the shop lays a hammer on the cabinet; a button on the truck driver's coat scratches it in delivery; or perhaps it has been marred in home demonstrations or while on display in the dealer's store. But whatever the cause, you have the remedy at hand for use.

The RCA Cabinet Refinishing Kit does not contain all the material you will need for every job. For example, it does not contain lacquer, or a lamp for heating the spatula. But things like that are obtainable anywhere. Only the hard-to-obtain things have been included; the items you would have to run all over town to get, if obtainable at all.
